WASTE

Vermicomposting

Red Worms are added to Kitchen Waste and other Organic Matter (Manure) in order to provide the soil with better fertility

This Results in not only managing the waste without harming the environment, it also provides a land fit to reap

HOW DOES DHARAVI TREAT IT'S WASTE?

- Sorting and segregation
- Crushing
- Cleaning
- Sold off to melting facilities

Ways to Manage Waste

There's Multiple ways like Incineration, Sanitary Lanfill Dumping but Vermicomposting is the best.
